Markov, A. A.
ON THE INVERSION COMPLEXITY OF A SYSTEM
OF FUNCTIONS. [1960] 6p. 2 refs.
Order from LC or SLA ml\$1.80, pt\$1.80 61-10179

Trans. of Akademiya Nauk SSSR. Doklady, 1957,
v. 116, no. 6, p. 917-919.

The following equality is seen to hold for every Boolean
function f : $\text{Inv}(f) = \text{pd}(D(\text{Alt}(f)))$. Here $\text{Inv}(f)$ denotes
the inversion complexity of the function f , $\text{Alt}(f)$ repre-
sents the variability of the function f , the binary
dimension of a number r is denoted by $D(r)$, and $\text{pd}(r)$
is the natural number directly preceding r for $r > 0$.

THE UNSOLVABILITY OF SEVERAL PROBLEMS EN
MASSE. [1960] [42]p.
Order from LC or SLA mi\$3.30, ph\$7.80 60-18689

Trans. of Russian mono. The Theory of Algorithms,
n.p., n.d., chap. 6, p. 202-223.

Previous results (60-18688) make it possible to establish the unsolvability of a series of mathematical problems en masse. All these problems are treated as problems on the determination of normal algorithms which permit certain properties of the objects studied to be decided. A series of problems of this kind concerns the theory of associative calculi, i.e., the constructive theory of so-called associative systems.
